Adidas Sales Dashboard - Documentation

Technical documentation | Prepared from the dashboard by Taiwo Ajayi (2020-2021 data)

1. Project Overview

Purpose: Give sales leadership a single-page view of revenue, profitability and order volume across time, geography, retailers, products and sales channels.

Business questions answered:

- How much revenue, operating profit and margin did Adidas generate?
- How did 2021 perform against 2020, and which months drive sales?
- Which regions, cities and retailers contribute most?
- Which products and sales methods perform best?
- Which days of the week are strongest?

Audience: Sales managers, regional heads, retail partnership leads and portfolio reviewers.

2. Dashboard Layout

Zone	Component	Purpose
Header	Title and Adidas logo	Branding and context
Left panel	Slicers: Region, Product, City	Filter by geography and product
Top right	Slicer: Years (2020, 2021)	Filter by year
KPI row	Total Revenue, Count of Orders, Total Operating Profit, Profit Margin	Headline performance
Row 1	Monthly revenue line (2020 vs 2021), Total sales per month, Revenue by Sales Method	Time trend and channel mix
Row 2	Revenue by Region, Total sales by Retailer, Revenue per Day	Where and when sales happen
Row 3	Revenue per product (male), Revenue per product (female), Top 5 cities	Product and city detail

Design notes: Purple monochrome palette, rounded grey cards, dark purple highlighting the top item in each chart and light purple for the rest, which draws the eye to the leader in every visual.

3. KPI Definitions

KPI	Value	Definition
Total Revenue	$899,902,125	Sum of total sales across all transactions
Count of Orders	9,648	Number of order or invoice records
Total Operating Profit	$332,134,761	Sum of operating profit
Profit Margin	37%	Operating Profit / Total Revenue (332.1M / 899.9M = 36.9%)

KPI	Value	Definition
Avg Revenue per Order (derived)	approx. $93,280	Total Revenue / Orders. High, so records are most likely bulk or wholesale lines

Equivalent DAX measures (for a Power BI rebuild):

```
Total Revenue = SUM(Sales[Total Sales])
Total Operating Profit = SUM(Sales[Operating Profit])
Order Count = COUNTROWS(Sales)
Profit Margin = DIVIDE([Total Operating Profit], [Total Revenue])
Avg Revenue per Order = DIVIDE([Total Revenue], [Order Count])
Revenue PY = CALCULATE([Total Revenue], SAMEPERIODLASTYEAR('Date'[Date]))
YoY Growth % = DIVIDE([Total Revenue] - [Revenue PY], [Revenue PY])
```

4. Data Source and Model (inferred from the visuals)

The dashboard implies a single sales table (or star schema) with these fields:

- **Dimensions:** Retailer, Region, State/City, Product, Gender (derived from product name), Sales Method (In-store, Online, Outlet), Invoice Date (year, month, weekday)
- **Facts:** Units Sold, Price per Unit, Total Sales, Operating Profit, Operating Margin

Recommended model: one Sales fact table with Date, Retailer, Product and Geography dimension tables joined one-to-many. Add a Date table with Year, Month, Month Number and Weekday columns so months and days sort correctly.

Data preparation steps:

1. Remove duplicates and fix data types (dates, currency, whole numbers).
2. Standardize retailer, city and product names.
3. Split Product into Gender and Category (e.g. Men's Street Footwear = Men / Street Footwear).
4. Build the Date table and mark it as the date table.
5. Create explicit measures instead of relying on implicit sums.

5. Visual-by-Visual Documentation

5.1 Monthly Revenue Line (2020 vs 2021)

Compares the two years across January to December. 2021 runs far above 2020 all year, peaking in July and again in December, with a dip around March. 2020 stays low, roughly in the 15M-25M range.

5.2 Total Sales per Month

Ranked bars of revenue by month (years combined). August leads at 95M, followed by 92M and 86M; the lowest months sit near 57M-64M (March is the lowest visible).

5.3 Revenue by Sales Method

Method	Share
In-store	40%
Outlet	33%

Method	Share
Online	27%

Physical channels (in-store plus outlet) account for about 73% of revenue.

5.4 Revenue by Region

Region	Revenue
West	$269.94M
Northeast	$186.37M
Southeast	$163.17M
South	$144.66M
Midwest	$135.80M

5.5 Total Sales by Retailer

Retailer	Revenue
West Gear	$242.96M
Foot Locker	$220.09M
Sports Direct	$182.47M
Kohl's	$102.11M
Amazon	$77.70M
Walmart	$74.56M

5.6 Revenue per Day

Friday (146,683) and Thursday (145,683) lead, then Tuesday (137,138). Monday is weakest (112,335). The values sum to about 900K, so they appear to be in thousands of dollars.

5.7 Revenue per Product

Product	Revenue
Men's Street Footwear	$209M
Women's Apparel	$179M
Men's Athletic Footwear	$154M
Women's Street Footwear	$128M
Men's Apparel	$124M
Women's Athletic Footwear	$107M

The chart titled "male" actually lists all six categories (values sum to about $901M). The female chart shows the three women's categories (179M, 128M, 107M).

5.8 Top 5 Cities by Revenue

Charleston $39.97M, New York $39.80M, San Francisco $34.54M, Miami $31.60M, Portland $30.55M.

6. How to Use the Dashboard

1. Pick a year in the **Years** slicer to compare 2020 and 2021.
2. Narrow by **Region**, then **City**, to see local performance.
3. Use **Product** to isolate a category and watch retailer and channel shifts.
4. Clear filters (funnel icon on each slicer) to return to the overall view.

7. Limitations

- The data covers only 2020 and 2021, so there is no long-term trend.
- Profit is shown only as a total and a margin; there is no profit by region, retailer or product.
- No targets or benchmarks are shown to judge performance.
